

## An Elementary Treatise on the Dynamics of a System of Rigid Bodies; With Numerous Examples

Filesize: 1.17 MB

### **Reviews**

*Completely essential read publication. It is really basic but excitement in the fifty percent of the book. You will not really feel monotony at anytime of your respective time (that's what catalogues are for about in the event you ask me).*

*(Lexie Paucek PhD)*

## AN ELEMENTARY TREATISE ON THE DYNAMICS OF A SYSTEM OF RIGID BODIES; WITH NUMEROUS EXAMPLES

To save **An Elementary Treatise on the Dynamics of a System of Rigid Bodies; With Numerous Examples** PDF, remember to click the link listed below and download the document or have accessibility to other information which are in conjunction with AN ELEMENTARY TREATISE ON THE DYNAMICS OF A SYSTEM OF RIGID BODIES; WITH NUMEROUS EXAMPLES book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1877 Excerpt: .contracting from loss of heat in course of time, the vis viva will not be constant, for the same reason as before. The increase of angular velocity produced by this contraction can be easily found by the conservation of areas. 337. Let gravity be the only force acting on the system. Let the axis of  $z$  be vertical, then we have  $Y = 0$ ,  $Y = 0$ ,  $Z = -g$ . Hence the equation of vis viva becomes  $Imv^2 - w^2 = -2 \int g (z - z_0) dz$ . Thus the vis viva of the system depends only on the altitude of the centre of gravity. If any horizontal plane be drawn, the vis viva of the system is the same whenever the centre of gravity passes through the plane. 338. The equation of Virtual Velocities in Statics is known to contain in one formula all the conditions of equilibrium. In the same way the general equation  $2m (J B_x + g B_y + g B_z) = 2m (X B_x + Y B_y + Z B_z)$ , may be made to give all the equations of motion by properly choosing the arbitrary displacements  $B_x$ ,  $B_y$ ,  $B_z$ . In Article 334 we made one choice of these displacements and thus obtained an equation in an integrable form. If we give the whole system a displacement parallel to the axis of  $a$  we have  $B_x = 0$ ,  $B_y = 0$ , and  $B_z$  is arbitrary. The equation then becomes  $2m \cdot A = 2mZ$ , which represents any one of the at three first general equations of motion...
