MEDICAL MATHEMATICS

The metric system of measurement is the most widely used system of measurement in the world. It is the preferred system for administering medications because it is based on a series of 10 measures or multiples of 10. It is a simple and accurate form of measurement between health care professionals.

**Metric Weight Measures**

1 kilogram (kg) = 1000 grams or 1000 g  
1 gram = 1000 milligrams or 1000 mg  
1 milligram (mg) = 1000 micrograms 1 microgram (mcg) = 0.001 milligrams or 0.001 mg  
1 milligram = 0.001 gram or 0.001 g  
1 microgram (mcg) = 0.000001 gram

**Metric Volume Measures**

1 milliliter (mL) = 0.001 liter or 0.001 L  
1 liter = 1000 milliliters or 1000 mL  
1 milliliter = 1000 liters or 1000 L

**Metric Length Measures**

1 millimeter (mm) = 0.001 meter  
1 centimeter (cm) = 0.01 meter or 0.01 m  
1 decimeter (dm) = 0.1 meter or 0.1 m  
1 kilometer (km) = 1000 meters or 1000 m  
1 meter (m) = 100 centimeters or 100 cm  
1 meter (m) = 1000 millimeters or 1000 mm  
1 centimeter (cm) = 10 millimeters or 10 mm

The apothecaries system of measurement is the oldest system of drug measurement. In fact, it was the first system used to measure medication amounts. It is infrequently used as a drug measurement. There are a few medications that are still measured in grains (gr). To ensure administration of the correct dose of medication to a patient, it is important to know the conversion of grains to milligrams and how to convert from one system of measurement to another.

**Apothecaries measures**

60 grains (gr) = 1 dram  
8 drams = 1 ounce or 1 oz  
1 fluid dram = 60 minims

The household system of measurement is based on the apothecaries system of measures. Household measures are used to measure liquid medications. Therefore understand one

teaspoon of liquid medication more clearly than knowing 15 milliliters. The important thing to realize with household measures is that these measures are not as exact as the metric system of measurement. Also the comparison of metric measures to household measures are not equal. These measures are called equivalent measures because the measurement is close enough. A liter is very close to equal measurement to a quart. It is not an exact measure. It is an equivalent.

**Household measures**

3 teaspoons (tsp) = 1 tablespoon or 1 tbsp  
1 ounce (oz) = 2 tablespoons or 2 tbsp  
1 pint (pt) = 2 cups or 2 c  
1 pint (pt) = 16 ounces or 16 oz  
1 juice glass = 4 ounces or 4 oz  
1 coffee cup = Usually 6 ounces or 6 oz, but can

Reviews

Very beneficial to any or all class of individuals. It is rally interesting throgh looking at time. You will not feel monotony at at any time of your time (that's what catalogs are for concerning in the event you question me).

(Dr. Dallas Reinger IV)

## MEDICAL MATHEMATICS (SPEEDY STUDY GUIDES: ACADEMIC)

To read **Medical Mathematics (Speedy Study Guides: Academic)** eBook, you should refer to the web link under and save the ebook or gain access to other information that are have conjunction with MEDICAL MATHEMATICS (SPEEDY STUDY GUIDES: ACADEMIC) book.

Speedy Publishing LLC, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Mathematics in medicine is a very important part of the health care process. Nurses and doctors must be able to perform math functions to administer proper dosages of medicine. Medicinal amounts are based on the weight of a patient. A doctor must convert weight from pounds to kilograms and then into milligrams to determine correct prescription dosages. A medical professional must be able to read bodily fluid test amounts in terms of microlitres and deciliters. In medical research statistics are used to gather data and publish results of studies. Cat scans and x-rays use mathematical calculations. Luckily there are charts to help nurses and doctors quickly make conversions, however these professionals must understand how to perform these calculations without them in certain situations.
