

The Swelling and Doping of Polyelectrolyte Multilayers

By Bucur, Claudiu

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | From Theory to Applications | This book attempts to provide insight into the mixing, hydration and annealing of self-assembled, multilayered films based on precise counting of their doping ions and water content. Several practical applications are then explained in light of this theory. Polyelectrolyte multilayers are ideal mixes forming amorphous films. While the properties of ordered organic monomolecular layers such as liquid crystals or amphiphiles can be dominated by the nature of a few defects, in disordered systems the overall amorphous nature not only defines their properties but also makes the materials less sensitive to details of the preparation process. Charged polymer chains are entropically driven to interact electrostatically based on the concentration of small ions in solution. Their hydration can be used to extrapolate a universal doping parameter which can be used to better characterize and classify any existing ionic dopants and films. These films can be used to control the electroluminescence of ruthenium bipyridine based on its controlled diffusion to a coated platinum electrode. They can also inhibit corrosion of metals by shielding of harmful ions in solutions. | Format: Paperback | Language/Sprache: english | 180 pp.

Reviews

A new electronic book with an all new standpoint. It usually fails to charge too much. Its been printed in an exceedingly basic way in fact it is simply following i finished reading this book through which basically altered me, affect the way in my opinion.

-- **Dr. Amie Bogisich**

This publication will be worth purchasing. This is for all those who statte there was not a worthy of reading through. I discovered this publication from my dad and i suggested this pdf to find out.
